EDUCATION

Arizona State University | MS Computer Engineering

Aug 2023 – May 2025

Foundations of Algorithms, Probability and Random Processes, Digital Image and Video Processing and Compression, Software Validation and Verification Testing, Information Assurance and Security

University of Mumbai, India | BE Electronics and Telecommunications

June 2017 – July 2021

Image Processing and Machine Vision, OOP using Java, Neural Networks and Fuzzy Logic, Microprocessors and Peripheral Interfacing, Embedded Systems, Microcontrollers Interfacing, Discrete Time Signal Processing

EXPERIENCE

Larsen & Toubro Infotech Mindtree, Mumbai, India | Senior Software Engineer

July 2021 – May 2025

- Simplified third-party XML signature service by creating an efficient web API service using Nodejs and integrated.
- Led a Document feature integration team to incorporate "submit and sign application" to the react web app.
- Streamlined debugging async functions by implementing unit test cases using the Jest framework.
- Automated JSON creation through python script that in turn reduced manual labor decreasing overall efforts to enter data.

Botonomics Automations LLP, Mumbai, India | Trainee Backend Developer

May 2020 – March 2021

- Implemented a single-click login functionality in collaboration with the backend team using Google, LinkedIn, and FB open APIs.
 - Enabled a bot to communicate through a flask app with a telegram bot using its open APIs.
 - Effectively implemented integrations of Google Cloud Platform function into the flutter app.
-

TECHNICAL SKILLS

Languages & Frameworks: Python, GIT, Java, NodeJS, ReactJs, SQL, C/C++, C#, SQL, .NET, Flutter, Android, Django, Flask

Cloud: Amazon Web Services (AWS), Microsoft Azure, Google Cloud Platform (GCP).

Tools: MATLAB, SQL, Eclipse, Maven, Pycharm, Microsoft Office Suite, Visual Studio, Visual Studio Code, Slack, Jira, Confluence

Web Design: HTML5, CSS3, JavaScript, PHP, AJAX, JSON

PROJECTS

- **Bot Detection using Personality and Sentiment Extraction from Text:** Collaborated in a team to do a regressive analysis of social media textual content to detect bots and sentiments from them (**NLP, BeautifulSoup, Flask**).
 - Developed three different web scrapers to extract data from multi-platform websites using beautiful soup package.
 - Trained several models using logistic regression and then SVM binary algorithm using the data sets.
 - The project was part of a research project to prove a hypothesis if we could detect personality of certain bots on social media.
 - **URL Shortener:** Creates shorter URL to post on Twitter (**Node.js, APIs, MongoDB**)
 - An API to create short URLs using Express, and MongoDB. Created the API and deployed it to test integration with the DB.
 - The project was build in order to gain insights into node js API creation and creating a legible shorting service for very long URLs.
 - **Covid Alert Bot:** A python script finds vaccination slots in the area recognized by pin code. (**Python, smtplib, requests**)
 - Leveraged python's SSL, smtplib packages to send emails.
 - This was built in an effort to manually check slot openings on the portal and streamline vaccination slot booking for me.
 - **Cryptoverse:** Created a MERN stack single-page web application to get the latest cryptocurrency news (**React, Redux, express**)
 - A pre-developed API is used to get news about different cryptocurrencies. React Component for each cryptocurrency was used to render it on the frontend
 - This was made because of my interest in cryptocurrencies and in an effort to have a common portal to read about different crypto.
 - **Drowsy Driver Detection System:** Developed a Python program to detect the eyes of the driver- The program detects the eye movement of the driver and alerts them by an alarm sound if the eyes are shut for more than 5 seconds (**Python**)
 - Used Python's cv2 library for face and eye detection. Used Python's GUI library Tkinter for UI and Pygame for alarm sounds
-

OTHER WORK EXPERIENCES

Arizona State University, Tempe, AZ | Instructional Aide

September 2023 - Present

- Undergrad Instructional Assistant for GIT:215 Intro to Web authoring Help students with queries in HTML and CSS concepts, Assist professor with grading and evaluations.
-
